Owner plans to use an approved contractor: \_\_\_\_\_

Owner plans to manage compost themselves: \_\_\_\_\_

Additional litter/ shavings available (amount): \_\_\_\_\_

**Cleaning and Disinfection:** All vehicles entering premise from date of diagnosis through quarantine release should follow biosecurity guidelines. Vehicle C&D should follow basic C&D protocol: clean (remove organic material), wash, rinse, apply disinfectant, contact time, rinse again if necessary) to ensure efficacy of the process using a disinfectant approved for HPAI. Approved disinfectants include the following: Virkon, Viracide, and Viracid. All exterior and interior surfaces must be addressed. Disinfectant should be reapplied as necessary to keep the surfaces wet for the required contact time. For highly contagious agents, containment of spray drift and splash may be necessary to prevent aerosol contamination.
